The site was at the intersection of 92nd Avenue and the 2nd Avenue Bridge. The bridge was built in the early 20th century to accommodate the growing needs of the city. The bridge was designed to withstand the weight of heavy vehicles and to provide a direct link between the two sides of the river. It was constructed of steel and concrete and was considered a marvel of engineering at the time. The bridge has since undergone several renovations and is still in use today, providing an essential connection to the community.
